

This is an example

TABLE OF CONTENTS

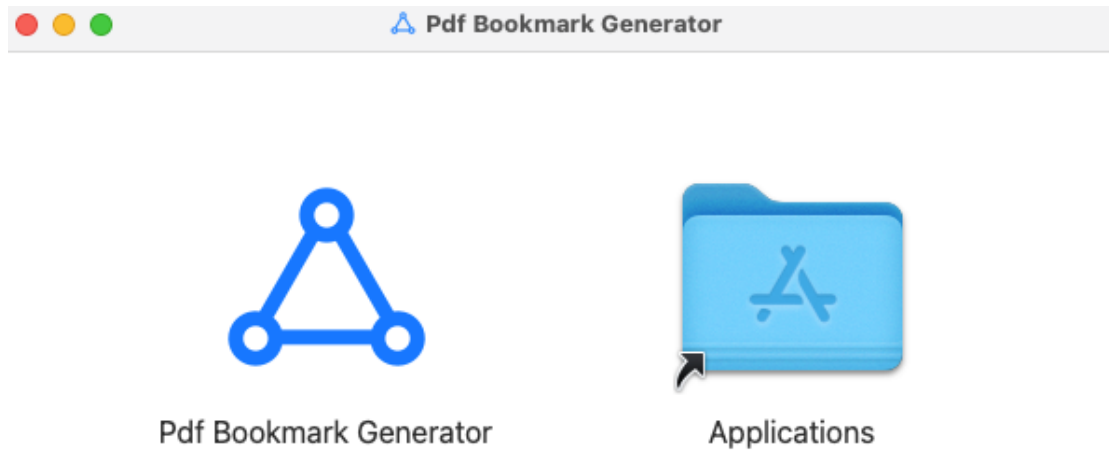

Make good use of table of contents to create bookmark text file. We can use Mac OS built-in OCR (take pictures using Screenshot, than save, select text, copy and paste) or other OCR tools to extract this if the table of contents is in image format.

Installation

Double-click Pdf Bookmark Generator.dmg

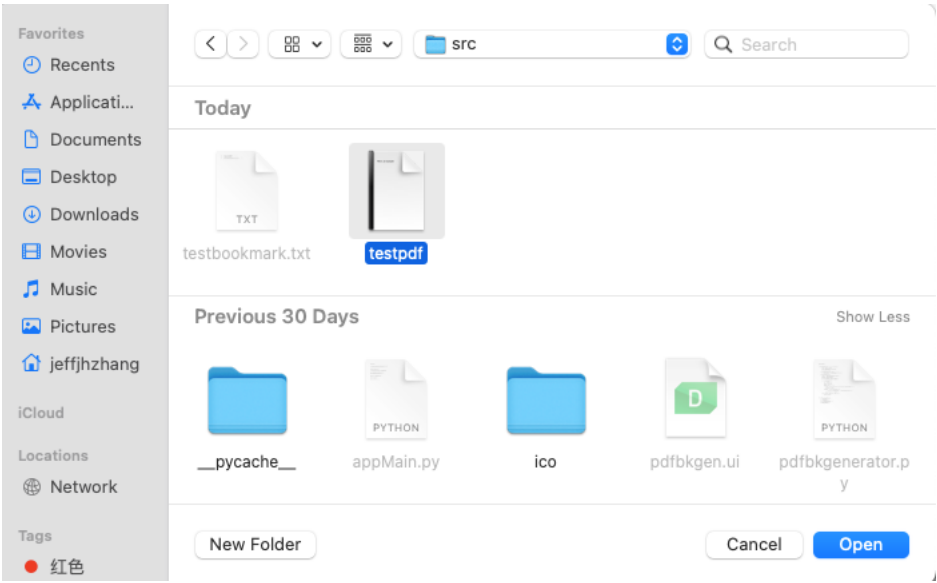

How to use pdf bookmark generator

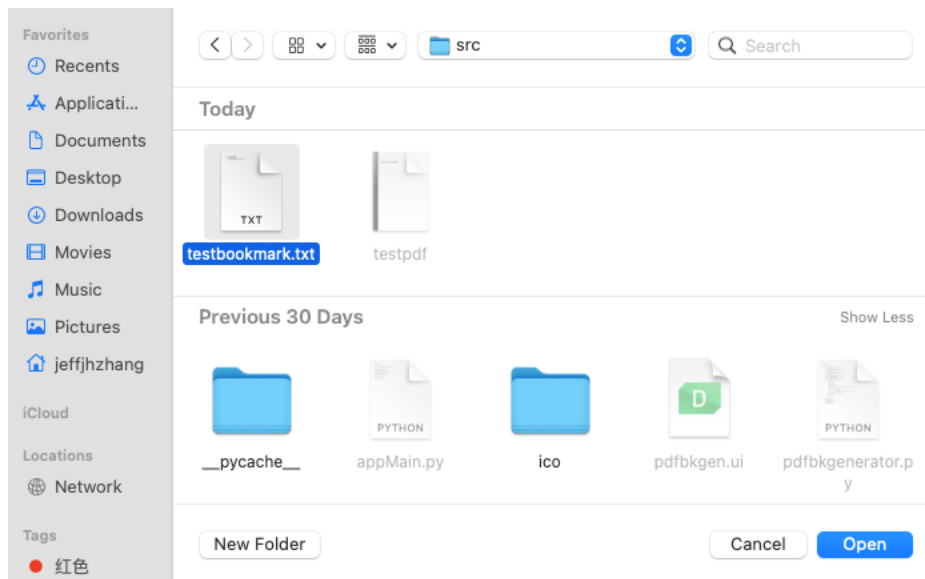

The image shows a screenshot of a macOS-style application window titled "PDF Bookmark Generator". The window has a light gray title bar with three colored window control buttons (red, yellow, green) on the left. The main content area is light gray and contains two input fields and two buttons. The first input field is labeled "PDF path" and is currently empty with a blue border. To its right is a button labeled "Select PDF". The second input field is labeled "Bookmark path" and is also empty. To its right is a button labeled "Select Bookmark". At the bottom right of the window is a button labeled "Run".

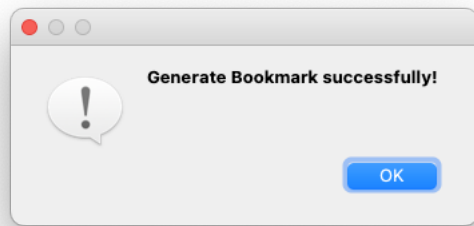

Select PDF file.

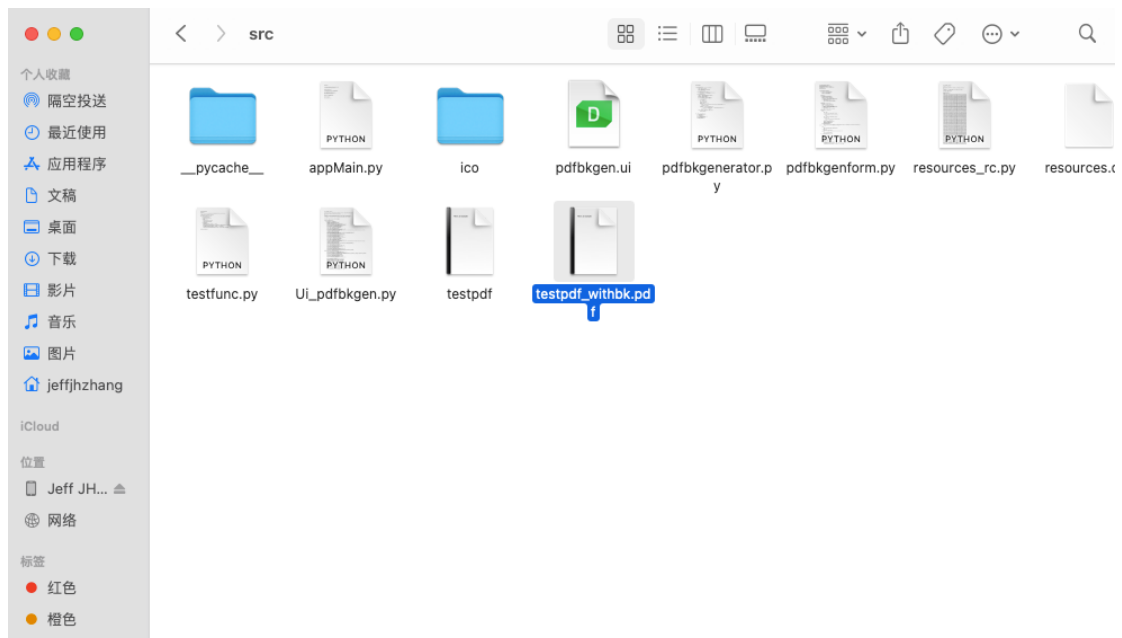

Select text file that include bookmark info

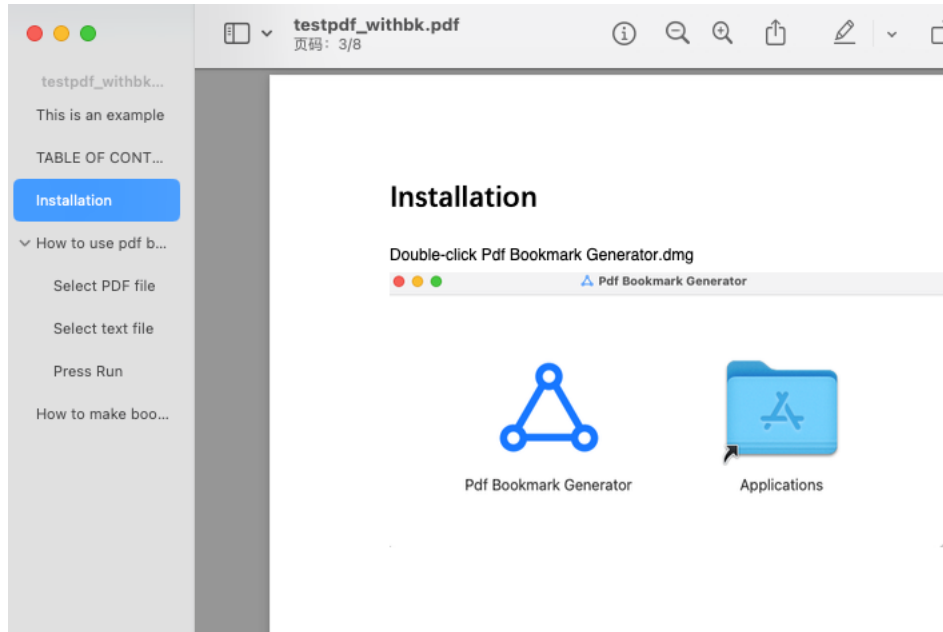

Press Run

Press ok, the new pdf with bookmark was generated in the same folder of your original pdf. Its name ends with "withbk".

Open it
